Description			
The element eposb:Segment/eposb:drillingOperation/eposb:DrillingOperation/eposb:drilledSegment is recursive, i.e. it can only be empty or have eposb:Segment as content. I can't see any situation when this would be necessary, it doesn't even make sense so I regard it as bug. The situation is similar to issue 22792, there for borehole, here for segment. Remove this element or explanation needed!
